About Us

Aristotle Credit Partners, LLC specializes in ESG (environmental, social and governance)-integrated corporate credit investing. The team is led by Portfolio Managers Doug Lopez, CFA and Terry Reidt, CFA, who have been managing credit-focused strategies together since 1995, including while at their prior firm. The Portfolio Managers, who are also senior credit analysts, are supported by four analysts with an average industry experience of 18 years. Terry Reidt serves as the lead Portfolio Manager for Investment Grade.

Objective & Philosophy

The Investment Grade Corporate Bond strategy seeks to outperform the total return of the benchmark while actively managing portfolio risk.

We believe:

- The combination of [top-down](#) and [bottom-up](#) analysis leads to the most comprehensive perspective on the corporate credit market.
- The integration of [ESG factors](#) into our analysis enhances our credit selection process.
- [Disciplined risk management](#) is a critical component of investing in corporate credits and should be carried out at both the security and portfolio level.

Investment process includes the following tenets:

Focus on Quality

Investments are focused on the “A” and “BBB” tiers of the investment grade corporate market as we believe these credits generally possess more favorable risk-reward profiles compared to other credits in the sector.

We seek credits with strong fundamentals, ample cash flow, solid capital structures and stable or improving financial profiles.

In-Depth Research

Our process blends economic and market analysis with industry and credit research to formulate portfolio themes and identify investments with attractive relative value.

Qualitative research is supplemented by quantitative tools to enhance our process and help manage risk at the security and portfolio level.

ESG Considerations

We believe ESG analysis can highlight unique, non-traditional credit research factors that may be ignored by other corporate credit investors.

ESG factors are incorporated into our bottom-up, fundamentally driven research process, with a particular emphasis on corporate governance.

¹Benchmark represents the Bloomberg Barclays U.S. Corporate Investment Grade Index.

²2014 is a partial-year period of eight months, representing data from May 1, 2014 to December 31, 2014.

Past performance is not indicative of future results. Performance results for periods greater than one year have been annualized. Returns are preliminary pending final account reconciliation. Returns are presented gross and net of investment advisory fees and include the reinvestment of all income. The Portfolio Data shown is based on a representative account. This material is not financial advice or an offer to buy or sell any product. Please see important disclosures at the end of this document.

¹Benchmark represents the Bloomberg Barclays U.S. Corporate Investment Grade Index.

The Investment Grade Corporate Bond - Institutional Composite was renamed the Investment Grade Corporate Bond Composite effective September 30, 2020. The Aristotle Investment Grade Corporate Bond - Institutional Composite (the Composite) includes all discretionary accounts managed in this strategy. The objective of the Aristotle Investment Grade Corporate Bond - Institutional strategy is to optimize long-term returns with a focus on mitigating market risk. The strategy is benchmarked to the Bloomberg Barclays U.S. Corporate Investment Grade Index. The accounts in this composite consist of all separately managed fee paying discretionary portfolios invested mainly in Investment Grade Credit securities, with a benchmark similar to the Bloomberg Barclays U.S. Corporate Investment Grade Index in both asset class allocation and duration. The Composite will include only accounts that do not utilize leverage and do not have significant tax treatment or cash flow needs. It excludes Wrap accounts. A list of composite descriptions is available upon request. Past performance is not indicative of future results. The Portfolio Data, Allocation by Credit Rating, Top 5 Overweights and Underweights by Industry, Top 10 Holdings and Contribution to Duration figures shown are based on a representative account from the Composite. The representative account was chosen since, in our view, it is the account within the Composite that most closely reflects the portfolio management style of the strategy. Not every client's account will have these exact characteristics. The actual characteristics with respect to any particular client account will vary based on a number of factors, including but not limited to: (i) the size of the account; (ii) investment restrictions applicable to the account, if any; and (iii) market exigencies at the time of investment. Aristotle Credit reserves the right to modify its current investment strategies and techniques based on changing market dynamics or client needs. This is not a recommendation to buy or sell a particular security. Recommendations made in the last 12 months are available upon request. The Bloomberg Barclays U.S. Corporate Investment Grade Index measures the performance of investment grade corporate bonds that are U.S. dollar-denominated and have a remaining maturity of greater than one year. The volatility (beta) of the Composite may be greater or less than that of the benchmark. It is not possible to invest directly in this index. Composite and index returns reflect the reinvestment of income. Composite returns are presented gross and net of actual investment advisory fees. Returns are presented net of trading costs. Net returns reflect the additional deduction of management fees and are based on the actual account-level net returns. Performance is expressed in U.S. dollars. Yield to Worst is the lowest potential yield expressed as a percent that can be received on a bond without the issuer actually defaulting. Effective Duration is an approximate measure of the strategy's sensitivity to interest rate changes taking into consideration any maturity shortening features. Maturity (Avg.) is a finite period of time at the end of which the financial instrument will cease to exist and the principal is repaid with interest. Coupon (Avg.) is the weighted average of the coupon of each bond in the strategy. Price (Avg.) is the weighted average of each bond price in the portfolio. Turnover is calculated by taking either the total of amount of purchases or total sales of portfolio securities (whichever is less), over a particular period, and dividing it by the monthly average market value of the portfolio during that period. Credit Rating: sourced from Standard & Poor's (S&P), Moody's and Fitch. Ratings values are based on the middle of the three ratings if all three credit rating agencies rate the security; based on the higher rating if rated by two of three credit rating agencies; or based on the sole agency's rating if rated by only one of the three credit rating agencies. The ratings represent their (S&P, Moody's, Fitch) opinions as to the quality of the securities they rate. The ratings from AAA (S&P, Fitch) or Aaa (Moody's) (extremely strong capacity to meet its financial commitment) to D (S&P, Fitch) or C (Moody's) (in default). Ratings are relative and subjective and are not absolute standards of quality. The ratings provided relate to the underlying securities within the portfolio and not the portfolio itself. Unrated securities do not necessarily indicate low credit quality.

Aristotle Credit Partners, LLC (Aristotle Credit) is an independent investment adviser registered under the Investment Advisers Act of 1940, as amended. Registration does not imply a certain level of skill or training. More information about Aristotle Credit, including our investment strategies and objectives, can be found in our Form ADV Part 2, which is available upon request.
